

Frequently Asked Questions

Q1. Does Entech Industries cater to large industry or small business?

Entech specialises in provision of services to government and medium to very large companies. We have extensive experience in the mining and manufacturing industry with a very wide range of projects completed.

Q2. Does Entech Industries have expertise in contaminated site remediation?

Yes, Entech has a wealth of experience in resolving complex, site contamination problems often involving development and testing of a custom chemical treatment processes. We have experience in a wide range of approaches, ranging from chemical immobilisation and solidification to thermal desorption and always act to provide our client with the most cost effective and safest alternative.

Q3. Entech is part of the DoloMatrix International Group of companies. What benefits does this bring your clients?

The companies forming the DoloMatrix Group are: DoloMatrix, Chemsal, SRL Plasma, BCD Technologies and Entech Industries. Each has it's own area of specialisation within the environmental and waste management industry and where necessary will combine and share resources and capabilities to provide our customers with the best possible results.

- DoloMatrix is the parent company and owner of the patented DoloCrete fixation technology
- Chemsal has many years experience in chemical collection, storage, resource recovery and contaminated site remediation. It is also the owner of the Hazpak technology.

Q4. Does Entech employ qualified, professional staff?

All of Entech's consultants are university degree qualified professionals, most with higher degrees up to doctoral level and with many years experience in the environmental consulting and waste management industries.
